Detailed Findings

Methodology

This assessment was conducted using AutoRed v1.0, a GUI-based reconnaissance automation platform. The scan targeted `scanme.nmap.org` using the Production scan profile. Tools used included Nmap for port scanning, Subfinder for subdomain discovery, httpx for live host identification, WhatWeb for technology fingerprinting, and ffuf for directory enumeration. All findings were automatically parsed, normalized, deduplicated and severity-scored before being presented in this report.
